Monitoring Requirements Not Met for Bonneauville Borough Municipal Authority

Our water system violated one or more drinking water standards over the past year. Even though these were not emergencies, as our customers, you have a right to know what happened and what we did to correct these situations.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During 2024 we failed to monitor for the following contaminants and therefore cannot be sure of the quality of our drinking water during that time.

What should I do?

There is nothing you need to do at this time.

The table below lists the contaminant(s) we did not properly test for during the last year, the required sampling frequency, how many samples we took, when samples should have been taken, and the date on which corrective action samples were (or will be) taken.

Contaminant	Required sampling frequency	Number of samples taken	When all samples should have been taken	When samples were or will be taken
Nitrate	Quarterly	3 of 4	2 nd quarter of 2024	07/11/2024
Nitrite	Quarterly	3 of 4	2 nd quarter of 2024	07/11/2024
Combined Uranium	Every Six years	0 of 1	2024	01/29/2025

What happened? What was done? When will it be resolved?

Samples for Nitrate and Nitrite were missed during the 2nd quarter of 2024 at Entry Point 107, samples were collected on 07/11/2025.

Combined Uranium sampling was missed at Entry Point 103 and a make up sample was collected on 01/29/2025.
